SENIOR SOFTWARE ENGINEER

Senior Software Engineer with 9 years of experience building and scaling backend and platform services in Java/Spring and Node.js. At Roche, contributed to microservices managing user, role, tenant, token, and metadata systems, improving reliability and interoperability across distributed services on AWS. Developed and enhanced APIs powering access models, tenant lifecycle management, and cross-service data consistency within role, user, tenant, and metadata services. Helped extend the platform with global metadata APIs decoupled from application and tenant scope, enabling shared service consumption across teams. Collaborated with platform engineers and architects to refine API contracts, strengthen observability, and expand automated testing coverage. Background in UI engineering informs a design-minded, test-driven approach to backend architecture.

KEY SKILLS

Languages & Frameworks: Java (Spring Boot), Node.js (Express), Typescript, React, Python

Cloud & DevOps: AWS (EC2, S3, IAM), Kubernetes, Docker, Jenkins, GitHub Actions

Databases & Caching: PostgreSQL, DynamoDB, Redis

Testing & Quality: Unit, integration, and E2E testing (JUnit, Jest, Karate), CI/CD automation

System Design: Microservices architecture, API Design, Identity and metadata systems, Token management, Dev tooling

Collaboration & Leadership: Cross-functional communication, Feature ownership, service maintenance, technical documentation, onboarding, on-call and incident response

PROFESSIONAL EXPERIENCE

Roche, San Francisco, CA

January 2018 – August 2025

Senior Software Engineer

Collaborated on building and scaling backend microservices in Node.js and Spring Boot (Java) for identity, metadata, and token management across tenant, application, and user scopes. Contributed to the re-architecture of the metadata system on PostgreSQL, enabling flexible entity relationships and app-agnostic configuration that unblocked a key roadmap for the company's core platform. Improved developer experience and maintainability by centralizing route-level authorization, dockerizing local environments with LocalStack and Postgres, and supporting team onboarding through documentation and knowledge transfers.

- Owned and evolved a metadata service powering 20+ platform apps; introduced Redis caching to reduce DynamoDB reads by 11x and cut latency from 120ms to 30ms for key identity endpoints.

Birst, Redwood City, CA

November 2016 – December 2017

UI Engineer

Developed features for a customizable BI analytics dashboard using Angular, HTML, CSS, collaborating closely with design and product on scope and feasibility. Prioritized performance and memory footprint awareness in dashboard contributions, ensuring no regression in responsiveness or stability.

Glint, Redwood City, CA

December 2015 – September 2016

UI Engineer

Contributed to the early frontend and testing foundations of Glint's employee engagement analytics platform, building Angular and Node.js features for survey setup and analytics delivery.

- Contributed to the company's first end-to-end UI testing framework, setting up Selenium + Jenkins flows for automated functional regression coverage.

EDUCATION

B.S. Computer Science

Stanford University, Stanford, CA

September 2010 - June 2014
