

TRAVIS SANCHEZ
San Francisco, CA | johntsanch@gmail.com | www.linkedin.com/in/travissanchez
SENIOR SOFTWARE ENGINEER

Senior Software Engineer with 9 years of experience building and scaling backend and platform services in Java (Spring) and Node.js. At Roche, evolved microservices for identity, tenant, and metadata systems on AWS and designed a global metadata system enabling shared configuration across healthcare applications and platform services. Contributed to API and data model design for multi-tenant systems. Began career in UI engineering and transitioned into backend and platform development, bringing a design-minded, test-driven approach to building reliable systems.

KEY SKILLS

Languages: Java, TypeScript, JavaScript, SQL, Python

Backend: Node.js, Spring Boot, REST APIs, multi-tenant systems

Data & Caching: PostgreSQL, DynamoDB, Redis

Infrastructure: AWS (EC2, S3, IAM, SQS), Docker, CI/CD (GitHub Actions, Jenkins)

Testing: Jest, JUnit, Karate (integration/E2E)

Frontend (prior experience): React, Angular

AI/LLM: Agent-based workflows (personal projects)

PROJECTS

Personal Agent Platform (TypeScript, Node.js, React)

- Built a config-driven agent platform supporting job creation, execution, and run tracking
- Designed modular architecture for agent definitions, tool integration, and extensible execution flows
- Implemented REST APIs and worker-based execution for asynchronous job processing

PROFESSIONAL EXPERIENCE

Roche, San Francisco, CA

January 2018 – August 2025

Senior Software Engineer

- Owned and evolved a metadata service powering 20+ applications, supporting tenant-, application-, and user-level configuration in a multi-tenant platform
- Designed and led development of a global metadata system decoupled from application and tenant scope, enabling shared configuration across applications and platform services
- Designed a PostgreSQL-based data model for the global metadata system to support flexible entity relationships and app-agnostic configuration, enabling new platform capabilities
- Introduced Redis caching to reduce DynamoDB reads by 11x and improve latency from 120ms to 30ms for key identity endpoints
- Delivered backend APIs and features in Node.js and Spring Boot for identity, metadata, and token systems, integrating across multiple services in a multi-tenant platform

Birst, Redwood City, CA

November 2016 – December 2017

UI Engineer

- Developed frontend features for a customizable BI analytics dashboard using Angular, HTML, and SCSS, including an autocomplete system for Birst SQL filter expressions using a grammar-based approach
- Improved performance and stability of dashboard components by optimizing rendering and memory usage, maintaining responsiveness under large data sets

Glint, Redwood City, CA

December 2015 – September 2016

UI Engineer

- Developed Angular-based frontend features, including a PDF export system by rendering a print-optimized view and automating generation with Nightwatch
- Helped establish the company's first end-to-end UI testing framework using Selenium and Jenkins, enabling automated regression coverage for core user flows

EDUCATION

B.S. Computer Science

September 2010 - June 2014

Stanford University, Stanford, CA
